Re: Nacimiento and San Antonio Dams Capital Asset Management Program (CAMP) Funding

Dear Senators Laird and Caballero, and Assemblymembers Rivas and Addis:

Salinas Basin Water Alliance is an organization of landowners, growers, and agricultural businesses that farm on more than 80,000 irrigated acres. Our members are devoted to the long-term sustainability of water in our valley, both for farming and for the drinking water supply of our community.

On behalf of the Board of Directors, we respectfully urge that you **support requests** for funding in the FY 23/24 State Budget for critical operational and safety upgrades at the Nacimiento and San Antonio Dams located in Monterey and San Luis Obispo counties. Nacimiento and San Antonio Dams provide flood control, drought resiliency, water supply, groundwater recharge, recreational, and other benefits to the California Central Coast. The Nacimiento and San Antonio Dams Capital Asset Management Program (CAMP) projects include a series of subprojects to fully rehabilitate the original dams, built in the 1950s and 1960s, to ensure their continued service for Salinas Valley flood control and to provide critical water supplies to cities and over-drafted water basins in Monterey and San Luis Obispo counties. The estimated cost for the CAMP projects is **\$160 million**.

The Monterey County Water Resources Agency owns and manages the dams and identified subprojects comprising the CAMP in compliance with the Federal Energy Regulatory Commission (FERC) and California Department of Water Resources, Division of Safety of Dams (DSOD) regulations and ensures long-term operability and safety of these facilities. The proposed high-priority subprojects were identified based on three goals: (1) compliance with federal and state regulatory requirements; (2) restoring full operational functionality; and (3) public and employee safety.

Page 2

Both dams are designated by the State as Extremely High Hazard Dam facilities providing critical flood protection to the greater Salinas Valley and mitigating downstream flooding, including regions where flooding could cut off the Monterey Peninsula and its member cities. In Monterey County, the reservoirs recharge groundwater basins that serve over 200,000 residents in five cities and unincorporated areas that utilize wells for their primary drinking water supply. The reservoirs support more than 418,000 acres of highly productive farmland known as the “Salad Bowl of the World” that exports across the globe to 13 major trading partner countries. The agricultural industry is the foundation of Monterey County’s economy, generating an estimated \$11.7 billion annually and sustaining over 63,900 jobs critical to supporting disadvantaged communities in the region.

In San Luis Obispo County, water from Nacimiento is delivered through a 45-mile pipeline to five participating agencies and cities. The City of San Luis Obispo has a contractual entitlement to 5,482 acre-feet per year of water from the project. The City of Paso Robles is one of the participants in the Lake Nacimiento Water Project with a 6,488 acre-feet per year water entitlement to reduce its dependency on the Paso Robles Groundwater Basin and provide a reliable long-term water supply for the city.

These reservoirs provide a buffer against drought conditions in both Monterey and San Luis Obispo Counties, mitigating seawater intrusion in critically over-drafted groundwater basins and facilitating the implementation of Groundwater Sustainability Plans. These beautiful reservoirs also serve as regional recreational watersports and camping destinations for the central coast and southern California counties residents and visitors.

We are grateful for your leadership and ongoing support to our residents and communities in the central coast region and appreciate your consideration of funding these critical flood control and water supply infrastructure projects. Should you have any questions regarding this request please contact the County of Monterey’s Public Policy Advisor, Ashley Walker of Nossaman LLP, at (916) 442-8888

Sincerely,

George Fontes

President, Salinas Basin Water Alliance
