Overview of the Ground Water Reporting Program

History of the Ground Water Reporting Program

In February 1993, the Monterey County Board of Supervisors adopted Ordinance No. 3663 that required water suppliers within Zones 2, 2A, and 2B to report water-use information for ground water extraction facilities (wells) and service connections to the Monterey County Water Resources Agency (Agency). Monterey County Ordinance No. 3717, which replaced Ordinance No. 3663 and was adopted in October 1993, modified certain other requirements in the previous ordinance while keeping the ground water extraction reporting requirements in place for wells with a discharge pipe having an inside diameter of at least three inches.

The Agency has collected ground water extraction data from well operators, for the period beginning November 1 and ending October 31, starting with the 1992-1993 reporting year. Information received from the 300-plus well operators in the above-referenced zones of the Salinas Valley is compiled by the Ground Water Extraction Management System (GEMS) portion of the Water Resources Agency Information Management System (WRAIMS), a relational database maintained by the Agency. The intent of the ground water reporting program is to provide documentation of the reported amount of ground water that is extracted from Zones 2, 2A, and 2B of the Salinas Valley Ground Water Basin each year.

Since 1991, the Agency has required the annual submittal of Agricultural Water Conservation Plans (Ordinance 3851), which outline the best management practices that are adopted each year by growers in the Salinas Valley. In 1996, an ordinance was passed that requires the filing of Urban Water Conservation Plans (Ordinance 3886). Developed as the urban counterpart of the agricultural water conservation plans, this program provides an overview of the best management practices being implemented by urban water purveyors as conservation measures.

2013 Ground Water Summary Report

The purpose of this report is to summarize the data submitted to the Agency by well operators in February 2014 from the following annual reports:

- Ground Water Extraction Reports (agricultural and urban)
- Water Conservation Plans (agricultural and urban)
- Water and Land Use Forms (agricultural)

The agricultural data from the ground water extraction program covers the reporting year of November 1, 2012, through October 31, 2013; the urban data covers calendar year 2013. The agricultural and urban water conservation plans adopted for 2014 are also summarized. This report is intended to present a synopsis of current water extraction within the Salinas Valley, including agricultural and urban water conservation improvements that are being implemented to reduce the total amount of water pumped. It is not the purpose of this report to thoroughly analyze the factors that contribute to increases or decreases in pumping.

Reporting Methods

The Ground Water Conservation and Extraction Program provides well operators with a choice of three different reporting methods for each of their wells: Water Flowmeter, Electrical Meter, or Hour Meter (timer). The summary of ground water extractions presented in this report is compiled from data generated by all three reporting methods. Ordinance 3717 requires annual pump efficiency tests and/or meter calibration of each well to ensure the accuracy of the data reported.

Disclaimer

While the Agency has made every effort to ensure the accuracy of the data presented in this report, it should be noted that the data are submitted by individual reporting parties and are not verified by Agency staff. In addition, since so many factors can affect the extraction calculations, it is understood that no reporting method is 100 percent accurate. The Agency maintains strict quality assurance in the compilation, standardization, and entry of the data received. The Agency received Ground Water Extraction Reports from ninety-seven percent (97%) of the 1871 wells in the Salinas Valley for the 2013 reporting year. Agricultural and Urban Water Conservation Plan submittals for 2014 were ninety-four percent (94%) and ninety-five percent (95%), respectively.

Reporting Format

Ground water extraction data are presented in this report by measurement in acre-feet. One acre-foot is equal to 325,851 gallons.

Ground Water Extraction Data Summary

The Salinas Valley Ground Water Basin is divided into four major hydrologic subareas whose boundaries are derived from discernible changes in the hydrogeologic conditions of the underground aquifers. Figure 1 (below) illustrates the Agency-designated Zones of the Salinas Valley in relation to the hydrologic subareas.

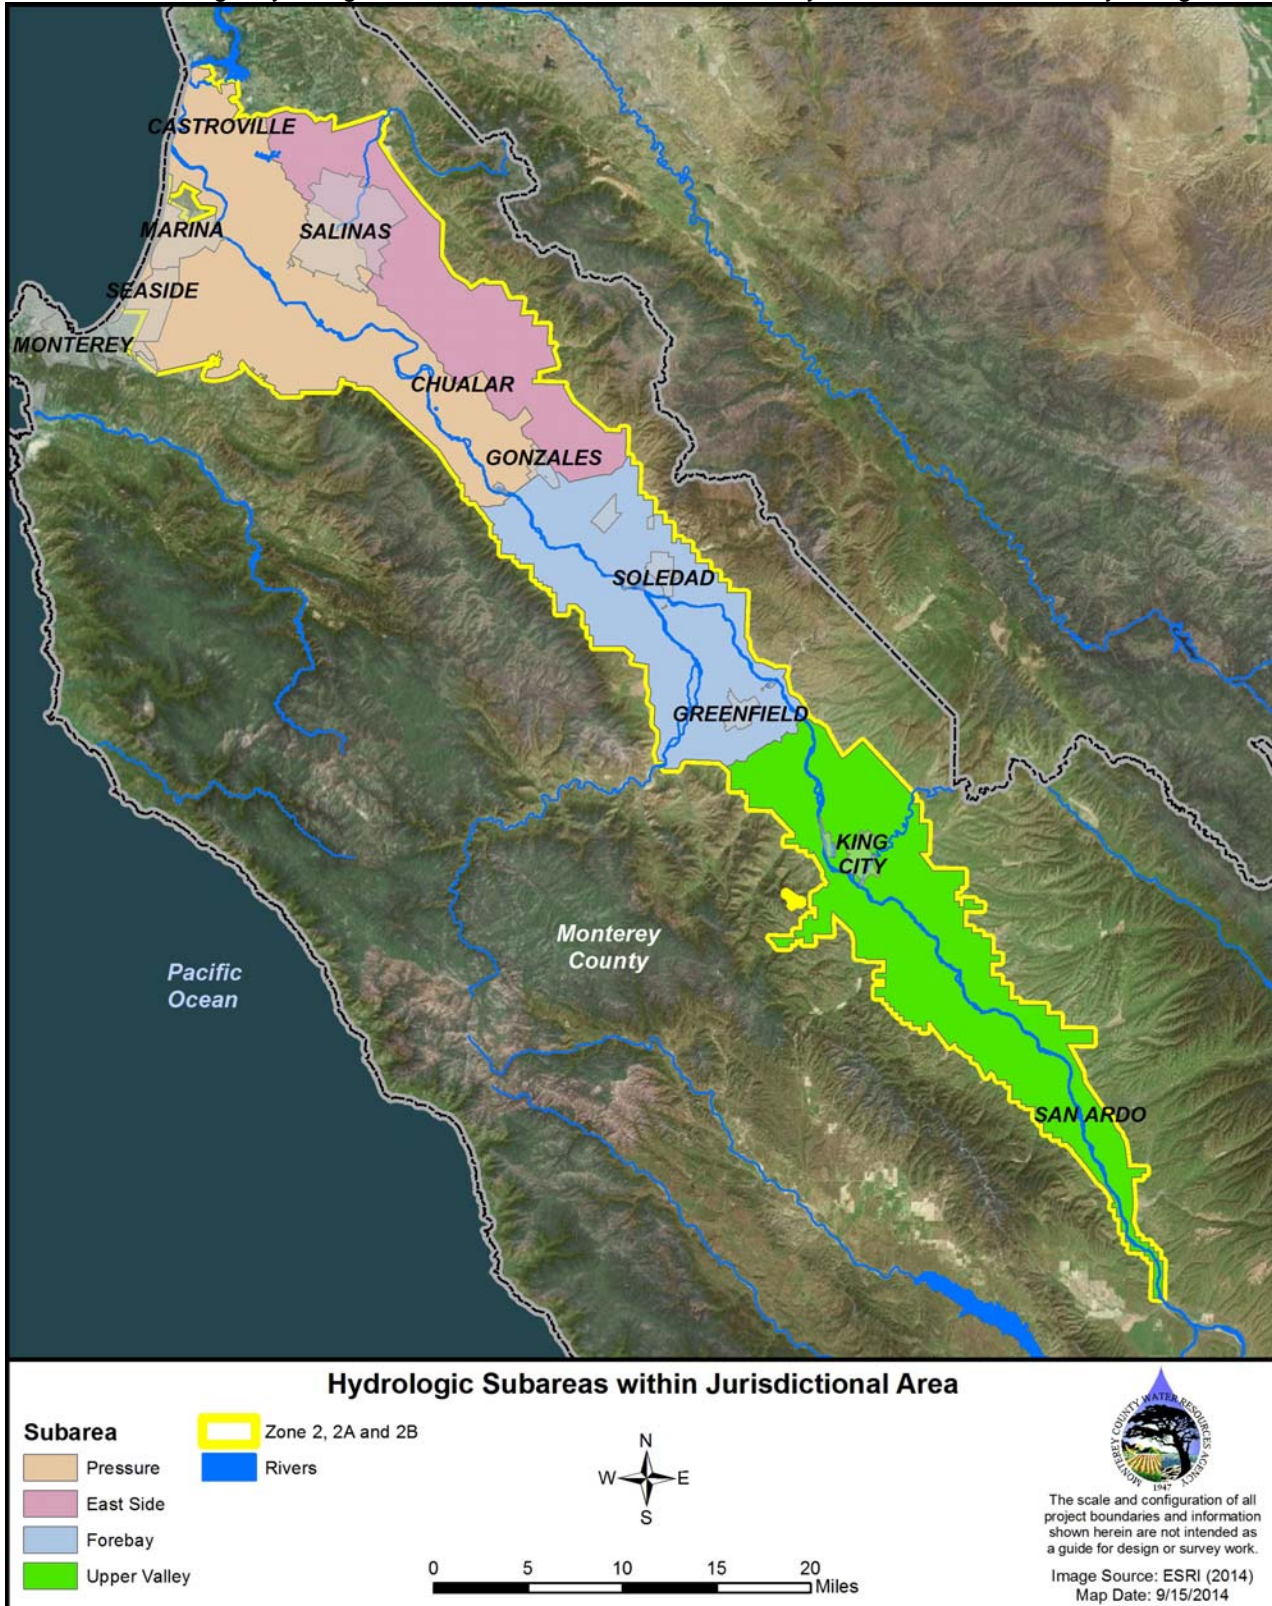

Figure 1. Agency Zones and hydrologic subareas of the Salinas Valley Ground Water Basin

Ground Water Extraction Data Summary (continued)

Summary of Methods Used for Extraction Reporting

The distribution of methods used for ground water extraction reporting (agricultural and urban) for the 2013 reporting year is shown in Table 1; a percentage distribution by volume is shown in Figure 2.

Table 1. Total extraction data by reporting method

Reporting Method	Acre-Feet per Reporting Method	Wells per Reporting Method
Water Flowmeter	357,914	1,401
Electrical Meter	141,049	402
Hour Meter	9,242	16
Total (2013)	508,205	1,819
Average ('04-'13)	496,385	1,766

Figure 2. Percentage distribution by volume of methods used for extraction reporting

Total Extraction Data by Hydrologic Subarea and Type of Use

The total ground water extractions for the 2013 reporting year are summarized by hydrologic subarea, type of use (agricultural and urban in Table 2), and percentage (Figure 3).

Table 2. Total extraction data by hydrologic subarea and type of use

Subarea	Agricultural Pumping (acre-feet)	Urban Pumping (acre-feet)	Total Pumping (acre-feet)
Pressure	98,141	19,101	117,242
East Side	82,895	14,727	97,622
Forebay	140,574	7,893	148,467
Upper Valley	141,263	3,611	144,874
Total	462,873	45,332	508,205
Percent of Total	91.1%	8.9%	100%

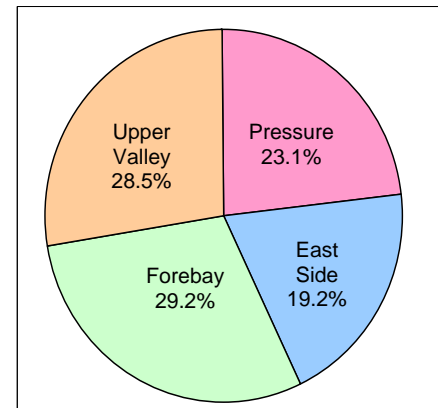

Figure 3. Percentage of total extractions by hydrologic subarea

Urban Extraction Data by City or Area

The total ground water extractions attributed to urban (residential, commercial/institutional, industrial, and governmental) pumping for the 2013 reporting year are summarized by city or area in Table 3. Figure 4 shows how the total urban pumping for 2013 is apportioned among each city or area.

Table 3. Urban extraction data by city or area

City or Area	Urban Pumping (AF)	Percentage of Total
Castroville	809	1.78%
Chualar	121	0.27%
Gonzales	1,461	3.22%
Greenfield	2,306	5.09%
King City	2,515	5.55%
Marina	4,317	9.52%
OA* - Pressure	2,740	6.05%
OA - East Side	2,113	4.66%
OA - Forebay	1,132	2.50%
OA - Upper Valley	518	1.14%
Salinas	22,581	49.81%
San Ardo	114	0.25%
San Lucas	34	0.08%
Soledad	2,794	6.16%
Soledad Prisons	1,777	3.92%
Total	45,332	100.00%

* OA = Other Areas

Figure 4. Distribution of urban extractions by city or area

Agricultural Water Conservation Plans

The Agricultural Water Conservation Plans include net irrigated acreage, irrigation method, and crop category. This information is forecasted and indicates what the grower plans to do in the upcoming year. It reflects the changing trends in irrigation methods in the Salinas Valley. Tables 4, 5, 6, and 7 show the distribution of irrigation methods by crop type for 1993, 2012, 2013 and 2014, respectively. Figure 5 (on the following page) illustrates the irrigation method trends from 1993 to 2014.

Table 4. 1993 - net acre distribution of irrigation methods by crop type (based on 94% companies reported)

1993	Furrow	Sprinkler & Furrow	Hand Move Sprinklers	Solid Set Sprinklers	Linear Move	Drip	Other ¹	Total
Vegetables	2,349	84,060	30,764	6,607	3,827	3,682	0	131,289

Total	350	18,321	20,968	11,172	651	124,285	828	182,150

¹ "Other" may include an irrigation system not listed here or a different combination of systems

² "Other Type" is for other crop types not included, i.e. cactus, flower bulbs, etc.

NOTE: Percentage of companies reported varies from year to year

Agricultural Water Conservation Plans (continued)

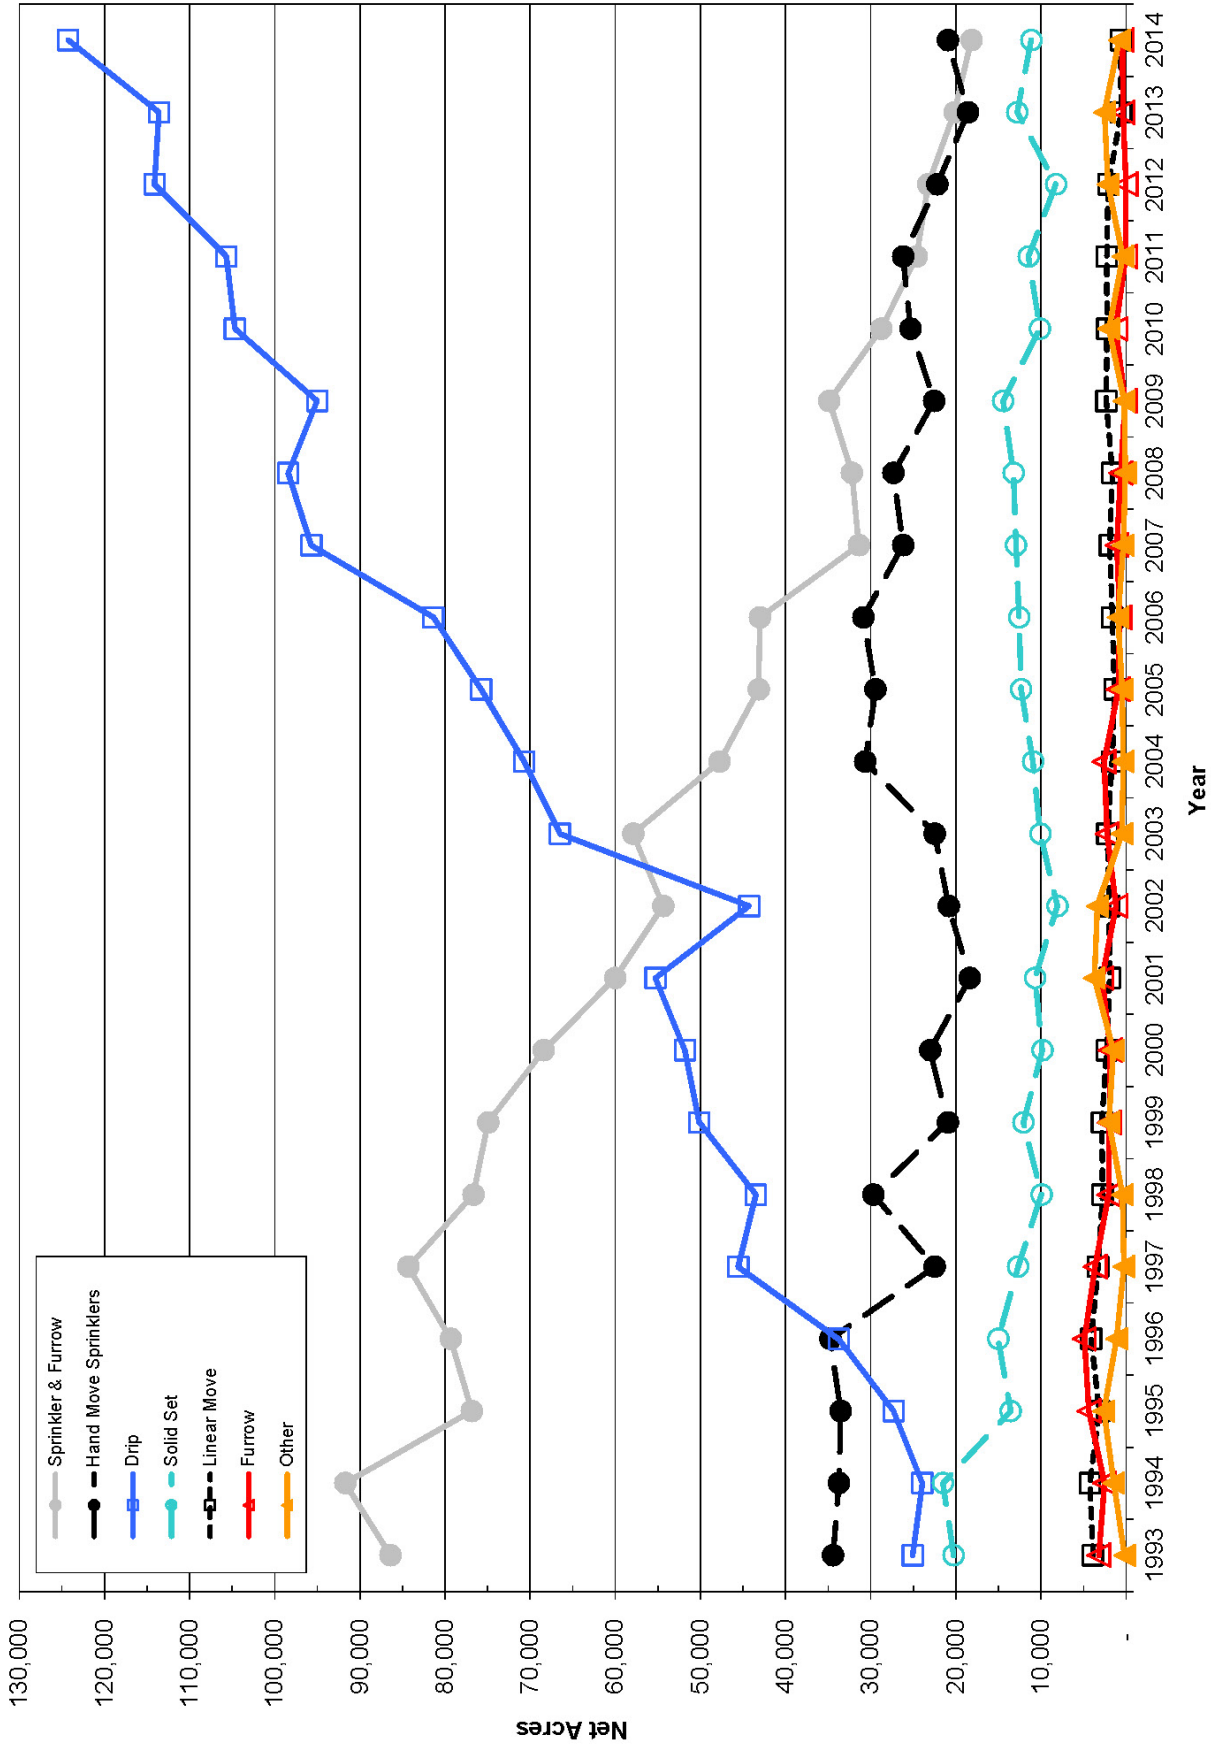

Figure 5. Types of irrigation methods used in the Salinas Valley based on companies reported

NOTE: Reported net acres vary from year to year

Agricultural Water Conservation Plans (continued)

Since 1991, Salinas Valley growers have submitted Agricultural Water Conservation Plans to the Agency. Table 8 shows the number of net acres, by year, for selected Best Management Practices (BMPs) or water conservation measures which were reported to be implemented over the past five years.

Table 8. Agricultural Best Management Practices reported to be adopted from 2012 through 2014

Best Management Practices	2010	2011	2012	2013	2014
12 Months Set Aside	7,447	3,285	8,172	1,314	8,077
Summer Fallow	692	1,944	688	1,462	953
Water Flowmeters	138,957	144,353	141,595	132,104	141,546
Time Clock/Pressure Switch	144,853	153,715	152,488	144,693	146,406
Soil Moisture Sensors	44,644	46,121	46,309	45,953	48,636
Pre-Irrigation Reduction	96,908	99,362	94,954	92,338	88,741
Reduced Sprinkler Spacing	90,065	97,926	90,503	89,289	80,797
Sprinkler Improvements	111,889	115,517	115,946	108,617	107,463
Off-Wind Irrigation	114,843	116,209	114,110	108,243	103,862
Leakage Reduction	113,820	115,255	113,372	110,565	115,274
Micro Irrigation System	67,383	87,464	93,146	84,031	92,222
Surge Flow Irrigation	8,785	11,473	12,275	10,154	8,685
Tailwater Return System	16,581	15,402	13,577	8,220	12,160
Land Leveling/Grading	73,361	76,436	79,534	65,306	72,224

Note: Due to unique crop rotations, it is difficult to account for each BMP used on total Crop Acres; therefore Net Acres were used.

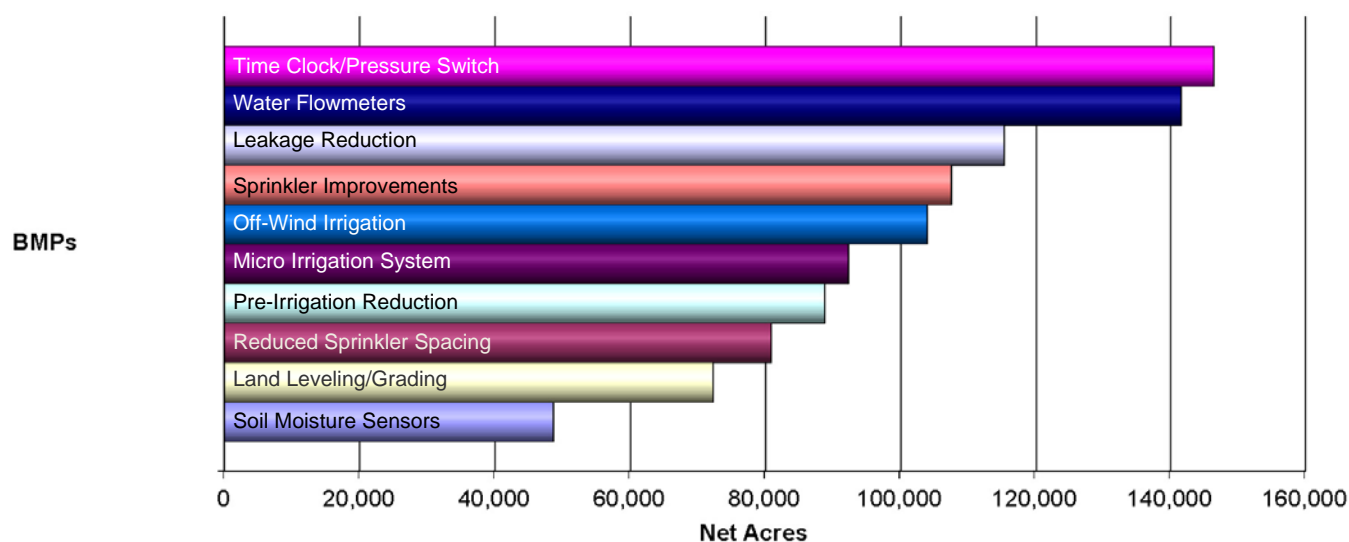

Figure 6. Top Ten Best Management Practices forecasted for 2014 based on reported net acres

Water and Land Use Forms

Agricultural Water Pumped

The following three figures present the agricultural water pumped (Fig. 7), irrigated net acres (Fig. 8), and amount of water used per acre (Fig. 9) by hydrologic subarea and crop type. The data was compiled using the reported acreage and water pumped from the 2013 Water and Land Use Forms. The data accounts for all crop types reported and all reporting methods: Water Flowmeter, Electrical Meter, and Hour Meter.

Changing weather patterns, variable soils, and crop types affect the amount of water needed for efficient irrigation. Even during a normal rain year, pumping rates will vary from one subarea to another and crop types will vary depending on economic demand.

Water and Land Use Forms (continued)

Figure 7. 2013 reported acre-feet by crop type & hydrologic subarea

Water and Land Use Forms (continued)

Figure 8. 2013 reported net acres by crop type & hydrologic subarea

Water and Land Use Forms (continued)

Figure 9. 2013 reported acre-feet/acre by crop type & hydrologic subarea

Urban Water Conservation Plans

Since 1996, the Agency has been collecting data for the Urban Water Conservation Plan program. Table 9 shows the forecasted adoption of “Best Management Practices” (water conservation measures) for the past three years, as a percentage of total acreage reported. It is important to note that, while all of the listed practices apply to “large” water systems (200 or more customer connections), not all apply to “small” water systems (between 15 and 199 customer connections). The practices that apply **only** to large systems are printed in **bold** below.

Table 9. Urban Best Management Practices reported to be adopted from 2011 through 2014

Best Management Practices	2012	2013	2014
Provide speakers to community groups and media	81%	85%	79%
Use paid and public service advertising	96%	89%	89%
Provide conservation information in bill inserts	95%	94%	90%
Provide individual historical water use information on water bills	92%	96%	60%
Coordinate with other entities in regional efforts to promote water conservation practices	95%	94%	90%
Work with school districts to provide educational materials and instructional assistance	92%	91%	91%
Implement requirements that all new connections be metered and billed by volume of use	99%	98%	99%
Establish a program to retrofit any existing unmetered connections and bill by volume of use	78%	39%	79%
Offer free interior and exterior water audits to identify water conservation opportunities	100%	98%	57%
Provide incentives to achieve water conservation by way of free conservation fixtures (showerheads, hose end timers) and/or conservation “adjustments” to water bills	90%	89%	95%
Enforcement and support of water conserving plumbing fixture standards, including requirement for ultra low flush toilets in all new construction	98%	94%	99%
Support of State/Federal legislation prohibiting sale of toilets using more than 1.6 gallons per flush	97%	97%	99%
Program to retrofit existing toilets to reduce flush volume (with displacement devices)	34%	48%	40%
Program to encourage replacement of existing toilets with ultra low flush (through rebates, incentives, etc.)	95%	89%	94%
Provide guidelines, information, and/or incentives for installation of more efficient landscapes and water-saving practices	90%	94%	96%
Encourage local nurseries to promote use of low water use plants	78%	77%	73%
Develop and implement landscape water conservation ordinances pursuant to the “Water Conservation in Landscaping Act”	63%	63%	62%
Identify and contact top industrial, commercial, and/or institutional customers directly; offer and encourage water audits to identify conservation opportunities	87%	89%	89%
Review proposed water uses for new commercial and industrial water service, and make recommendations for improving efficiency before completion of building permit process	84%	84%	85%
Complete an audit of water distribution system at least every three years as prescribed by American Water Works Association	92%	93%	89%
Perform distribution system leak detection and repair whenever the audit reveals that it would be cost effective	97%	98%	100%
Advise customers when it appears possible that leaks exist on customer’s side of water meter	99%	97%	100%
Identify irrigators of large landscapes (3 acres or more) and offer landscape audits to determine conservation opportunities	89%	90%	91%
Provide conservation training, information, and incentives necessary to encourage use of conservation practices	92%	96%	97%
Encourage and promote the elimination of non-conserving pricing and adoption of conservation pricing policies	86%	86%	92%
Implementation of conservation pricing policies	91%	91%	97%
Enact and enforce measures prohibiting water waste as specified in Agency Ordinance No. 3932 or as subsequently amended, and encourage the efficient use of water	71%	76%	73%
Implement and/or support programs for the treatment and reuse of industrial waste water / storm water / waste water	67%	66%	66%
