PUMP installed yes (Y) and no (N).

Well Number - reference to list on Figure 4 (Todd Engineers, May 1993).

Elev. from reference point (Surveyed by Whitson Engineers).

jDate Julian Date.

SU Stick-up from ground surface in feet.

Blank cell indicates either data were not collected or data sheets were not readable.

Appendix C

Summary of Information to Evaluate Water Rights

Appendix C: Summary of Information to Evaluate Water Rights

A number of different sources of information were used to prepare the water rights evaluation. No single source provided a complete set of information regarding the right, the priority of the right or the location and quantity of diversion. Therefore, reasonable efforts were made to combine the relevant data from each source to arrive at as complete a set of water rights information superior to September Ranch as possible. Each source is described below.

C.1 Water Rights Basics

In understanding the water rights evaluation, it is important to understand some basic tenets regarding water rights and which rights are superior or subordinate to other water rights. Water rights are governed by legal proceedings as opposed to regulatory procedures. As a result, they are complex and the discussion below is simplified to provide sufficient information to decision-makers.

Water rights are divided into those governing surface water and groundwater. In the Carmel River watershed, surface water includes the Carmel River surface flow as well as the CVA because the aquifer has been determined, through a series of legal proceedings and water rights decisions by the State Water Resources Control Board (SWRCB) to be a subterranean stream flowing in a known and definite channel.

Groundwater is restricted to percolating groundwater such as appears to occur in the SRA based on the hydrogeologic discussion in Section 3. Water rights law does not typically apply to groundwater except where a groundwater basin has been adjudicated by a court (i.e. the court has assigned specific water rights to groundwater users).

For surface water, riparian water rights are a matter of land ownership and applied to properties that are adjacent to surface waters. By contrast, appropriative water rights can apply to users who can document beneficial use of water even if their properties are not adjacent to the surface waters. As a result of legal changes, after 1914, appropriative water rights users were subject to a permit and/or license process. Prior to 1914, appropriative water rights were not subject to permits and/or licenses. *Riparian and pre-1914 appropriative water rights are superior to post-1914 appropriative water rights.*

C.2 Summary of Riparian Right Determination

In January 9, 2003, the law firm of Downey Brand Seymour and Rohwer (Downey Brand) submitted a Riparian Right Determination for September Ranch to the Monterey County Planning and Building Inspection Department.

The primary conclusions of Downey Brand's determination were:

1. The September Ranch has a riparian right to the waters of the Carmel River (including its underflow)

2. The riparian right of the September Ranch has been subordinated to those pre-1914 appropriative rights of the California- American Water Company which were determined in SWRCB Order No. WR 95-10.

Downey Brand further qualified their determination that:

3. No conclusions are drawn regarding the physical availability of water in the Carmel River (including its underflow) for use on the September Ranch property.
4. No conclusions of the underflow of the Carmel River physically occurs beneath the surface of September Ranch.

Based on the hydrogeologic discussions in Section 3, it appears that about 60 percent of the September Ranch aquifer does not overlie the underflow of the Carmel River (i.e. CVA). However, the westernmost 1/3rd of the SRA west of the Knoll appears to be collocated with Subunit 3 of the CVA (Figure 1, blue shaded area).

C.3 SWRCB Database

The SWRCB –Division of Water Rights maintains a state-wide database for water rights called the Water Rights Information Management System (WRIMS). Water rights data were purchased from the SWRCB for the Carmel River watershed. Not all riparian rights users submit information to SWRCB for the WRIMS database therefore it is assumed that WRIMS is not a complete data set.

The data elements that were used in evaluating the WRIMS data were:

- Record Type – WRIMS data for the Carmel River watershed included the following types:
 - a. APPLC for appropriative water rights with applications, permits, or licenses;
 - b. STOCK for stock ponds (Post-1914 appropriative);
 - c. SMDOM for small domestic registrations (Post 1914-appropriative);
 - d. FEDRL for federal filings (may be either riparian or appropriative); and
 - e. STATE for Statements of diversion or use of either riparian or appropriative rights.
- Point of diversion (POD) in township, range, section, and 1/16 of a section. The PODs are provided by the entity submitting the record and are not verified; therefore, the locations may not be accurate.
- Quantities of storage (AF) or rates of direct diversion (cubic feet per second or gallons per day)
- APPFILE DATE indicates the date that an application is filed. It has no bearing on when the water was first used. Therefore, there is no way to use the WRIMS database to establish seniority of pre-1913 appropriative rights.

The complete WRIMS data are included in this report in the attached CD-ROM as Appendix D.

C.4 SWRCB Water Rights Decision 1632 and 95-10

Tables 5, 12, and 13 of the SWRCB Water Rights Decision 1632 of July 6 1995 were reviewed to identify:

- Potential water users (riparian or appropriative) that do not appear in the WRIMS data base; and
- Distinguish between riparian and appropriative users for those records in the WRIMS database that were STATE types.

WRD 95-10 was reviewed and it was documented on page 22 that “Cal-Am has a pre-1914 water right; therefore, California Am should be limited to the estimated actual use by Cal-Am’s predecessors in 1913, an amount which does not exceed 1,137 AFA.”

C.5 MPWMD Pumping Reports

MPWMD provided pumping reports for those water rights holders who were granted “reserves” for appropriative water rights under Decision 1632 - Table 13 as well as for other entities that submitted information regarding quantities pumped. These data were cross-referenced with those entities found in the WRIMS database and in Decision 1632 to eliminate overlap as well as to identify potential users that have not been previously identified.
